

ALS1500 Automated Loading System

The Dia-Stron ALS1500 Automated Loading System is a multi-functional automated system, fully compatible with all modular units.

General Information

Principal benefits

- Automation increases higher throughput
- Minimises sample handling during testing
- 50 specimen cassette
- Post-testing specimen recovery
- Small footprint and low weight
- Easy to set-up and use
- Low maintenance and robust design

Application examples

- Single sample testing
- Compatible with Dimensional, Tensile, Cyclic and Torsional modules

System Description

The ALS1500 Automated Loading System was developed to satisfy the demands of higher throughput sample testing, without compromising data quality. Fully compatible with all modular units, each system can be customised to incorporate the exact testing modules required for a specific project. Its design allows for minimal user intervention, and will run a full 50 sample cassette unaided.
